

# The Ultimate J-Pole From Ultimate Signals

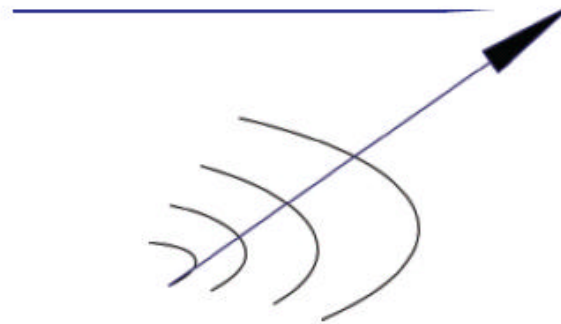

Thank you for purchasing one of our fine products. Your new dual band J-Pole antenna was built to last for years under normal or adverse conditions. It is rated to dissipate full legal power on both the 2 meter and 70 centimeter bands.

We are proud to announce that much time and testing went into the process of developing this antenna. Our laboratory tests, and extensive field tests have proven that this design provides approximately 4.7 dBi on 2M and 6.5 dBi on 70CM.

Your antenna has been pre-tuned for the 2M & 70CM ham bands. Should you wish to tune your antenna outside of these bands, simply loosen the nuts on the matching network clamps and slide the network up or down as desired. It is recommended that you use an antenna analyzer during this procedure, for best results.

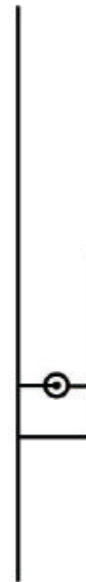

Feed your new antenna with high-quality coax for best results. Wind 4-5 loops of the coax, ~2" diameter, to form an RF choke at the antenna input. This will help decouple the antenna properly and give you the best results.

Enjoy your new Ultimate J-Pole!

*Rugged, dependable, quality.*
